

Setting Up Email on a BlackBerry BIS Vodafone

Setting up a BlackBerry with an Email address requires you to have Blackberry BIS enabled at the network and **GPRS** or **3G** in capitals in the top right hand of the screen. Please contact your Service Provider if your handset does not meet these requirements.

On the main home screen click on **Setup**, then click **Email Settings**.

Click on **Add an Email Account**.

When you are asked to add an **Email address**, put in the Email address you want to check and its password. Then click **Next** and follow the prompts. When the Email address has been added successfully you will receive confirmation details.

If you do not receive confirmation you may be required to supply the settings for your Email address (e.g. incoming mail server address, username and password). Your Emails will take approximately 20 minutes to start arriving.
