

# Splicecom Maximiser - a system that grows with your needs

Introducing the **maximiser** from SpliceCom - a business telephone system, designed and developed in the 21st Century for those requiring between 4 and 100,000 IP or analogue extensions.

Completely scalable in design and distributed in architecture, all **maximiser** systems are built around just four modules representing two core components – Call Server and Phone Module.

## Meeting the needs of smaller businesses

One of these four modules, the 5108 Call Server – has been specifically designed to meet the needs of smaller businesses and the branch offices of larger organisations.

Embracing open industry standards wherever they exist, all **maximiser** solutions appear to customers, employees and system administrators alike as a single system, no matter how many separate sites, homeworkers or mobile employees are encompassed.

## Simple web-browser management

**maximiser** is configured and managed as a single system via a standard web browser.

## Go anywhere, reach me any how

Supporting rich functionality including a one number, "go anywhere, reach me any how" facility. GSM mobile extensions, multi-site hot desking, voicemail, auto-attendant, unified messaging and call recording are included as standard.

**maximiser** is just as at home, and more importantly proves cost-effective, for simple 4 extension "dial-tone" PBX requirements as it does in fully converged, multi-site installations.

## 5100 Call Server

At the very heart of the **maximiser** architecture lies the Call Server. PBX, voicemail/auto attendant, Voice over IP (VoIP) Gateway and Gatekeeper, SIP Proxy Server, Dynamic Host Configuration Protocol

(DHCP) Server, Apache Web Server and Lightweight Directory Application Protocol (LDAP) database are all fully integrated and housed within the 5100 Call Server, which is supplied as a single, slim line unit.

The 5100 Call Server can scale up to 500 extensions, with any mix of analogue or IP. Multiple 5100 Call Servers can be "clustered" to form a single system, meeting higher density telephony requirements and/or eliminate any single point of failure in business critical environments.

## maximiser - Start Small, Think Large

A single 5108 Call Server provides all you need to deploy a simple, yet sophisticated business telephone system with four extensions and two trunk lines, scaling up to eight extensions and eight trunks.

## Small and Medium Sized Businesses

For smaller businesses that require a telephone system, the 5108 Call Server provides all the familiar **maximiser** features and benefits within a single compact unit. From simple analogue PBX, through mobility, voice processing, IP Telephony and integration with web based IT applications - the 5108 Call Server can support all these applications as it runs exactly the same **maximiser** software as its big brother the 5100 Call Server.
