

How to use mobile Internet to tether a BlackBerry® smartphone to a computer using BlackBerry Desktop Software 6.0

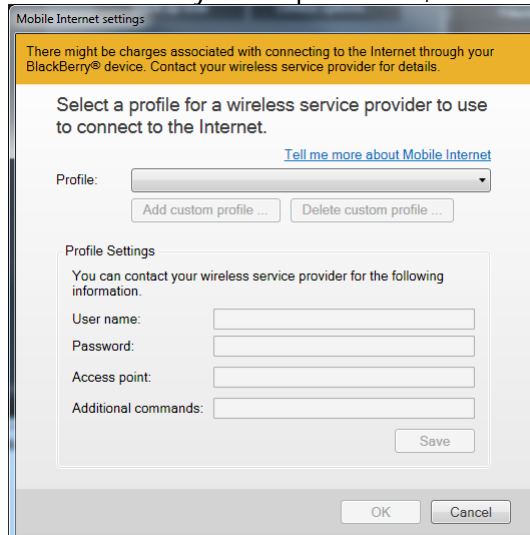

Depending on your wireless service provider, you can connect your BlackBerry smartphone to your computer with a USB cable and use it as a modem to connect to the Internet when your computer might not otherwise have access to the Internet.

You can use only one BlackBerry smartphone as a modem with your computer at a time. If your BlackBerry smartphone is associated with a BlackBerry Enterprise Server, contact your administrator to make sure that the appropriate IT policy is turned on to use this feature.

Set up your mobile Internet settings

Before you can use your BlackBerry smartphone as a modem, you must set up your mobile Internet settings. Select or create a profile that contains the information required by your wireless service provider to permit the Internet connection. Some profiles have been provided, but you can also create a new profile by completing the following steps:

1. Connect your BlackBerry smartphone to your computer.
2. In the BlackBerry Desktop Software, click **Tools** > **Mobile Internet settings**.

3. Do one of the following:
 - Click the profile for your wireless service provider in the **Profile** drop-down list. In the **Profiles Settings** section, type any required information that is not included in the profile. For more information, contact your wireless service provider
 - Click **Add custom profile** if your wireless service provider does not appear in the **Profile** drop-down list. Type a name for the profile. Contact your wireless service provider to determine the information that is required for the Profiles Settings section. Required information can vary for each wireless service provider, please see below for O2 and Vodafone settings
4. Click **OK**.

Connect to the Internet using your BlackBerry smartphone as a modem

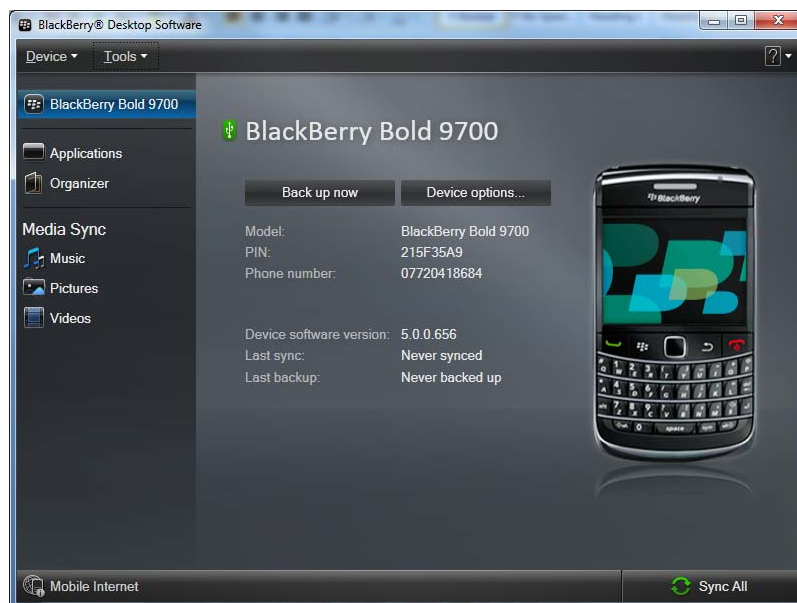

To perform this task, you must first set up your mobile Internet settings to create a connection profile. Depending on your wireless service plan, extra fees might apply.

1. Connect your BlackBerry smartphone to your computer.
2. In the BlackBerry Desktop Software, click **Tools > Start Mobile Internet**.
3. Click **Connect**.

To end the connection, click your Internet connection status and click disconnect. If the BlackBerry Desktop Software is already closed, you can also end the connection by clicking the **Dial-Up** icon in the notification area of the Windows taskbar.

Please note:

- In order to use your BlackBerry smartphone as a tethered modem please make sure you have spoken to your provider and made sure that you have an adequate data bundle, as all data used will go through the mobile internet APN and not the BlackBerry APN.
- If your BlackBerry is connected as a modem please make sure that all Windows updates are switched off as these can be large files and expensive to download!
- Arrow advises customers against streaming video services like YouTube and BBC iPlayer whilst using your BlackBerry smartphone as a modem. These services use huge amounts of data and can eat into your data bundle relatively quickly.
